Art Unit: 1714

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 2, 5, 7, 10 and 13-19 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Seneker et al.

Seneker et al disclose aqueous polyurethane dispersions and their use in preparing films (abstract). The polyurethane dispersions are taught as prepared from polyisocyanates and polyether polyols with degrees of unsaturation of 0.020 meq/gr or less and molecular weights of up to 8,000 (claim 1).

While the reference fails to explicitly recite a coagulated dispersion, coagulation is seen as necessarily flowing from the drying process in making the films.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 8 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Seneker et al in view of Wu et al.

Seneker et al teach the formation of films from aqueous polyurethane dispersions as discussed above. The reference fails to explicitly recite gloves as the final product.

The reference to Wu et al teaches the utility of polyurethanes in the production of gloves.

Art Unit: 1714

Therefore, it would have been obvious to one of ordinary skill in the art to utilize the compositions of the primary reference to produce gloves as taught by the secondary reference when the improve physical properties inherent in the film of the primary reference were desired.
